

With the Sun Parasol family launch, Suntory Flowers revolutionized the Mandevilla market for growers and gardeners. These plants are the perfect solution to create a lush tropical paradise summer after summer.

Suntory Flowers has developed many categories in the Sun Parasol lineup, including unique shrub forms perfect for container gardens and landscape plantings, large traditional climbing varieties that will cover trellises in the garden, and fun trailing varieties, perfect for hanging baskets.

**Sunbeam**  
Sunbeam is a true breakthrough and a highlight to the Original collection. This variety displays the richest sunny yellow color available in a Mandevilla while maintaining the exceptionally branched and highly floriferous plant habits that the Original series is known for.

### Original

The original Sun Parasol varieties are an interspecific hybrid between traditional Mandevilla and Dipladenia varieties. This creates a plant with a full shrubby habit and a lot of branching, giving us far more blooms and the large, open flower style of Mandevilla for a genuinely upscale display. These are also outstanding garden performers in containers and the ground with very little maintenance for summer-long color.

7 Marbled Crimson

### Giant

These traditional trellis varieties are favorites in the garden for creating a lush tropical display full of vivid color. These classic vining types have enormous flowers and larger leaves. Natural climbers thrive in heat and full sun for dramatic displays all summer. Gardeners love Red Emperor for its intense deep red color. Giant Dark Pink's blooms start out light and deepen with age, creating a tonal effect. Giant Marbled Crimson has bright white variegated foliage, unique in this class.

### Pretty

The Pretty varieties, like the Giants, are quick to cover walls and trellises with summer-long color. This pair is well recognized with a smaller, shiny, dark green leaf and an enormous amount of smaller blooms. Pretty varieties are also the most cold-tolerant lineup, so they are very popular with northern growers and gardeners.

Crimson

Pink

The Sundenia varieties are a sister series to the Sun Parasol line with large flowers on compact habits. This lineup makes an excellent choice for gardens and containers. The three original colors in this lineup are Sundenia Coral, Sundenia White, and Sundenia Red, with the shrubby container style habits. Sundenia Crimson is also a top seller in the collection, with a vigorous fast-climbing habit for trellises.

Early Bloomer

### Mitebuster

Mitebuster is the must-have variety for professional landscape installations. A unique rough foliage texture makes this plant impervious to mites and other foliage issues, yielding month after month of continuous worry-free color in the landscape.

### Apricot

Sun Parasol Apricot is a gorgeous designer color with pastel peach-colored blooms. The plants have incredible vigor and a load of branching, making them robust performers in the garden. These plants are not natural climbers but are best suited to hanging baskets, larger containers, and mass in-ground plantings.

Crimson

### Garden

The Sun Parasol Garden varieties are great selections for hanging baskets and mass in-ground plantings because of so much dense branching at the base of the plant. This creates these robust habits with mounding and cascading plants that are the best selections for premium baskets. You can also use the garden varieties in the ground, as you would a petunia, where they will create mounds of summer color.
